SMOOTHER PASSAGE

Arms with a 90-degree passageway allow for a smooth turn and lessen the impact of the turnstile arm on patrons after each passage.

SPECIAL DESIGN

Catrax Plus turnstile pedestal has rounded corners and plenty of internal space to facilitate the assembly of electronic and other types of components. As access is gained by a key lock, there are no exposed screws.

EASY TO INTEGRATE AND MAINTAIN

The Catrax Plus turnstile comes with a U-shaped mounting drawer that can be easily removed or replaced on the rear top panel by a key lock, thus facilitating the assembly and maintenance of electronic components.

ACCESS PERMISSION

Catrax Plus can be configured with pictograms to inform access permission and detect direction of movement.

ANTI-PANIC, DROP ARM SYSTEM

Through an anti-panic mechanism the arm drops leaving the access free. This special feature can be activated in emergency situations through a pushbutton, central control room or in the occurrence of a power failure. The Drop Arm Mechanism can optionally inform the system when the arm drops.

RELIABILITY AND SAFETY

Optical sensors and electromagnets are used to activate locks, thus preventing mechanical wear and increasing equipment life.
